

Salicylic Acid Paste Instructions

Salicylic Acid Paste instructions

Our Salicylic Acid Paste is a much more pleasant way of ridding your face, head or hands of common sun damage spots than the usual, painful freezing treatment with its large unsightly sores, pain, swelling and scarring.

Sun damage spots are not large brown freckles, but rough, scaly spots caused by years of exposure to strong sunlight.

Directions for use

Stir thoroughly before use. Dab a shallow blob of Salicylic Acid Paste onto the sun damage spots once a day for three days in a row. A tiny paintbrush is ideal for this.

There may be a mild sting for the first minute or two on sensitive skin. Leave on for at least two hours each day, then wipe off with a damp tissue or wash with soap and water.

One to three days after the last application you will generally find that the sun spots whiten, dry up, and peel off. However larger, deeper sun spots may need a repeat treatment.

Use for warts and pimples too

Salicylic Acid Paste is also highly effective for removing warts. These may take a little longer. Just keep applying the paste as above, once daily, until they fall out. Pimples generally need only one application.

Use Aloe Vera Gel afterwards

Apply our top quality Aloe Vera gel daily for two months afterward to the skin area which will assist with the healing process.

Storage and safety

Store in a dark place and keep out of reach of young children. Avoid contact with the eyes. If product is too dry, a little more cold pressed olive oil can be added.
