SALICYLIC ACID GEL

Instruction guide

Salicylic Acid Gel instructions

Our Salicylic Acid Gel is a gentle way to rid your face, head or hands of common sun damage spots.

Sun damage spots are not large brown freckles, but rough, scaly spots caused by years of exposure to strong sunlight.

Directions for use

1. Apply a shallow blob of Salicylic Acid Gel onto the sun damaged spots once a day for five days.
2. There may be a mild sting for the first minute or two on sensitive skin.
3. Leave on for at least two hours each day, then wipe off with a damp tissue or wash off with soap and water.
4. One to three days after the last application you will generally find that the sun spots whiten, dry up, and peel off. However larger, deeper sun spots may need a repeat treatment.

Use Aloe Vera Gel afterwards

Apply our top quality Aloe Vera Gel daily for two months afterwards to the skin area. This will assist with the healing process.

Use for pimples too

Pimples generally need only one application. Apply directly to the affected area at night and wash off in the morning.

Storage and safety

Store in a dark place and keep out of reach of young children. Avoid contact with your eyes. Always read the label and only use as directed. Not to be taken internally.
